

On 18.01.2025 at 19.00 hours the Preparatory Center of Kentau Campus held a round table discussion on the topic “Prevention of early pregnancy” for girls-students of the Preparatory Center with the training of the staff of AI outpatient clinic.

Our main goal in discussing the issues is to prevent early pregnancy among teenagers.

Here the main problem of early pregnancy is the lack of knowledge of sex education. More so than socially, girls are left alone and the young mother is at a dead end. Unfortunately, this is a common phenomenon due to early pregnancy.

With early pregnancy, the body works in an intensified mode is stressed on the heart, blood vessels, endocrine system and internal organs.

The body of teenage girls is not ready for such loads!
